

HOME ACCESS & CONTROLS

It's possible. It's practical.

Home automation technology can do more than open your Wayne-Dalton garage door. It can turn on lights, adjust the HVAC, disarm the security system, unlock doors and more.

Now, Wayne-Dalton makes home automation easy and affordable for homeowners.

It starts with Wayne-Dalton.

The garage door is the new front door for most people. The last thing most homeowners do when they leave home is close the garage door. The first thing most homeowners do when they get home is open the garage door. Starting with any Wayne-Dalton HomeSettings™ enabled garage door opener, you can use the same simple push of a transmitter button to turn on or off any HomeSettings items installed in your house.

Wayne-Dalton opens doors for builders, too.

As annual home automation sales approach \$5 billion, a Z-Wave enabled garage door opener gives builders an easy-to-install, affordable home control system. It's the in-demand upgrade that helps boost a home's appeal, marketability and value.
